HOW TO GET THE BEST RESULTS

Free *Gemini 3.6 Flash* Usage Guide

Gemini 3.6 Flash gives sharper answers when you match your request to what the model is built for, and these five tips show you how. Use these tips in the Gemini 3.6 Flash chatbot on AIFreeForever. No sign-up for first 3 messages.

1. **Give it room to think**
   Gemini 3.6 Flash uses thinking with a medium default level, so complex questions get a reasoned answer. Ask your full question in one message and let it work through the steps.

2. **Upload the right files**
   The model reads text, images, video and audio, and it also reads PDF. It then writes text. Add a PDF report or a screenshot and ask for a summary or a fix.

3. **Use the long context**
   A 1M-token context window and 64K-token answers mean you can paste a long document and still get a detailed reply. Large projects fit in one chat.

4. **Ask for multi-step work**
   It completes multi-step tasks with fewer turns and tool calls than 3.5 Flash. This means a plan, a build and a review can happen in one request.

5. **State your design rules**
   Human evaluators preferred earlier models for visual layout and styling, so explicit design guidelines help. Describe your colours, fonts and layout before asking for frontend code.

Gemini 3.6 Flash is made by Google. Chat with it for free at aifreeforever.com/chat/gemini-3-6-flash, with no login and no sign up.
